

Design Choices

Feedback: Provide feedback for the user throughout the page. On the navigation bar, the user can easily see what page they are on. When the user hovers over the checkout buttons, the user receives feedback when they hover over the checkout buttons. The color changes when they hover over it, so the users receive feedback to ensure they know what state they are in.

Actionable Items: There are two checkout buttons on the cart page to make the buttons accessible for users at all areas of the page. On the product details section in the middle, after the user scrolls down they can directly proceed to checkout. If they don't scroll down the product details in the middle section, they can easily checkout on the right-hand side as well.

Scalability: The page can easily scale if the user adds more products to the page. In the middle section, they can scroll down and view all the products in their cart, and on the right-hand side, the white box can be extended and be populated with all the order summary details.

Color and Visuals: The appearance and color of the page matches the color and visual aesthetic with the rest of the website. This helps to maintain consistency with the rest of the page
